
Java Hibernate - CRUD Operation - Read

Package :-> org.studyeasy

Class :-> App

Source Code :-

1. SessionFactory

```
//Session Factory
SessionFactory factory = new Configuration()
    .configure("hibernate.cfg.xml")
    .addAnnotatedClass(Users.class)
    .buildSessionFactory();
```

2. Session

```
//Session
Session session = factory.getCurrentSession();
```

3. Close the session

```
//Close the session
try {
    //Create Object of Entity Class Type
    Users user = new Users();
    //Start Transaction
    session.beginTransaction();
    //Perform operation
    user = session.get(Users.class, 2);
    //Commit Transaction
    session.getTransaction().commit();
    System.out.println(user);

}finally {
    session.close();
    factory.close();
}
```

Full Source Code:

```
package org.studyeasy;

import org.hibernate.Session;
import org.hibernate.SessionFactory;
import org.hibernate.cfg.Configuration;
import org.studyeasy.entity.Users;

public class App {

    public static void main(String[] args) {
        //Session Factory
        SessionFactory factory = new Configuration()
            .configure("hibernate.cfg.xml")
            .addAnnotatedClass(Users.class)
            .buildSessionFactory();

        //Session
        Session session = factory.getCurrentSession();

        //Close the session
        try {
            //Create Object of Entity Class Type
            Users user = new Users();

            //Start Transaction
            session.beginTransaction();

            //Perform operation
            user = session.get(Users.class, 2);

            //Commit Transaction
            session.getTransaction().commit();
            System.out.println(user);

        }finally {
            session.close();
            factory.close();
        }
    }
}
```

THIS IS THE FINAL CODE (App.java) FOR THE CRUD OPERATION WITH THE DEPENDANCIES

App.java

```
package org.studyeasy;

import org.hibernate.Session;
import org.hibernate.SessionFactory;
import org.hibernate.cfg.Configuration;
import org.studyeasy.entity.Users;

public class App {

    public static void main(String[] args) {
        //Session Factory
        SessionFactory factory = new Configuration()
            .configure("hibernate.cfg.xml")
            .addAnnotatedClass(Users.class)
            .buildSessionFactory();

        //Session
        Session session = factory.getCurrentSession();

        //Close the session
        try {
            //Create Object of Entity Class Type
            Users user = new Users();

            //Start Transaction
            session.beginTransaction();

            //Perform operation
            user = session.get(Users.class, 2); -> Instead of 2, use can use any id
                                                to fetch/read data.

            //Commit Transaction
            session.getTransaction().commit();
            System.out.println(user);

        } finally {
            session.close();
            factory.close();
        }
    }
}
```

Final Output in MYSQL Database

You will get error if you try to execute or run App.java again.

You have dependencies for both Hibernate Core and Hibernate EntityManager.

Since Hibernate EntityManager is part of Hibernate Core in version 5 and later, you typically don't need to include both dependencies explicitly.

However, it's harmless to have both included.
