SpringBoot_Handle Add Edit Post Form In Spring Boot

Edit Post

```
th:action="@{'/posts/{id}/edit' (id=${post.id})}"
```

Add below code in Post controller

```java
@GetMapping("/posts/{id}/edit")
    @PreAuthorize("isAuthenticated()")
    public String getPostForEdit(@PathVariable Long id, Model model){
        Optional<Post> optionalPost = postService.getById(id);
        if(optionalPost.isPresent()){
            Post post = optionalPost.get();
            model.addAttribute("post", post);
            return "post_views/post_edit";
        }else{
            return "404";
        }
    }
```

Post_edit.html

```html
<!DOCTYPE html>
<html lang="en" xmlns:th="http://www.thymeleaf.org">

  <head th:replace="/fragments/head :: head">

<body class="sub_page">

  <div class="hero_area">
    <div class="bg-box">
      <img th:src="@{/images/nav-bg.jpg}" alt="">
    </div>
    <header th:replace="/fragments/header :: header">
  </div>
  <!-- book section -->
  <section class="food_section layout_padding">
    <div class="container">
      <div class="heading_container">
      </div>
      <div class="row">
```

```html
        <div class="col-md-6">
            <div class="form_container">
                <h3>Edit post</h3>
                <form action="#"
                    th:action="@{'/posts/{id}/edit' (id=${post.id})}"
                    th:object="${post}"
                    method="post">
                    <div class="form-group">
                        <input type="hidden" id="account" name="account"
th:field="*{account}">
                        <input id="title" th:field="*{title}" name="title" type="text"
class="form-control" placeholder="title" />
                    </div>
                    <div class="form-group">
                        <textarea id="editor" th:field="*{body}" name="body"/>
                    </div>
                        <button type="submit" class="btn btn-primary">
                            Edit Post
                        </button>
                </form>
            </div>
        </div>
    </div>
  </section>
  <!-- end book section -->
  <footer th:replace="/fragments/footer :: footer">
</body>

</html>
```
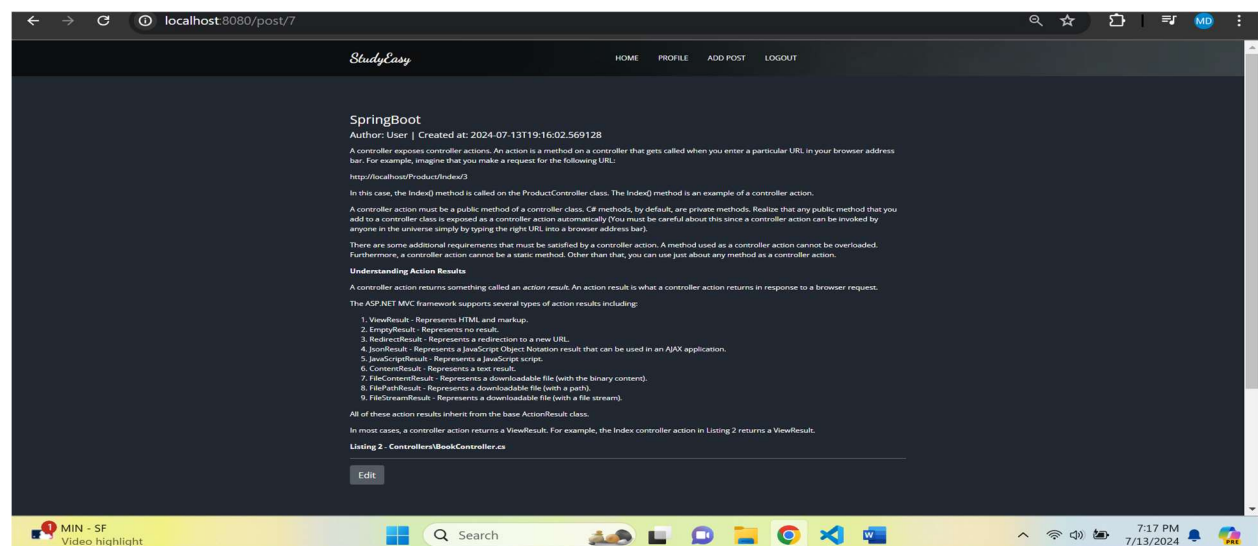

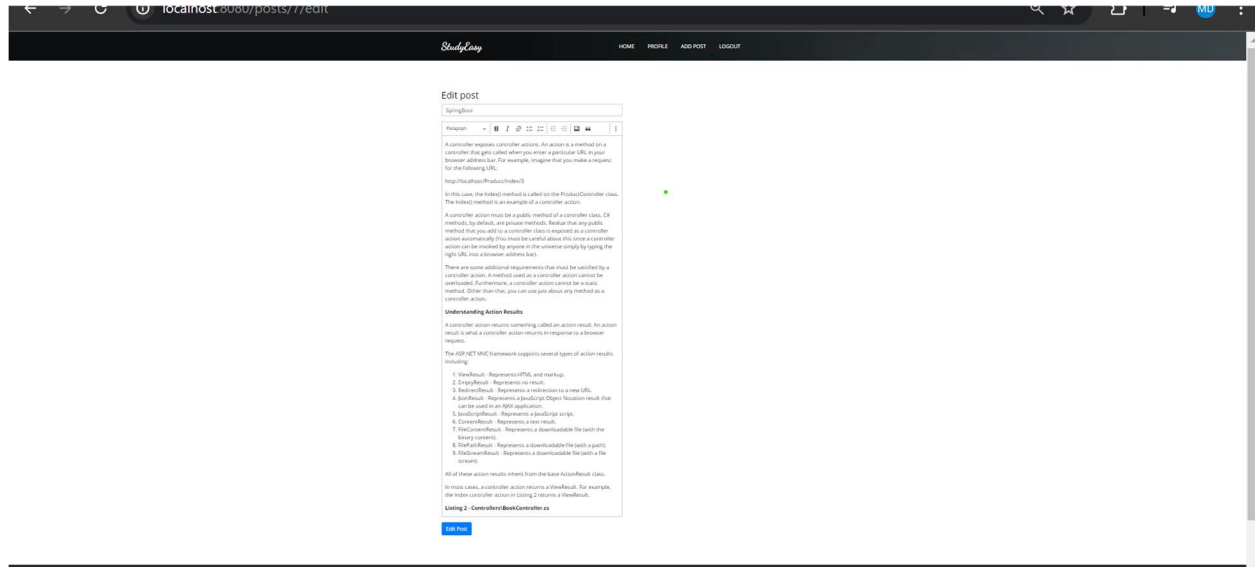

Output

After clicking on edit button

In Post.html

```html
<div sec:authorize="isAuthenticated()" th:if="${isOwner}">
                <a th:href="@{'/posts/'+ ${post.id} + '/edit'}" class="btn
btn-secondary btn-lg active" role="button" aria-pressed="true">Edit</a>
            </div>
```
